1.

Four friends had a competition to see who could collect the most stickers at a festival.

Owen did not collect the most stickers.

Betty had at least one person who collected less stickers than her.

Callie collected one more sticker than Simon.

They all collected a different number of stickers.

1. If the above statements are true, which one of the following statements must also be true?

1/1

Betty collected more stickers than Callie

Betty collected more stickers than at least one other person

Simon collected the least number of stickers

Owen collected more stickers than Betty

Question Feedback:

From the information which we are given, we know that Betty was ahead of at least one person and that Callie is ahead of Simon by one sticker. We also know that Owen does not have the most stickers.

Out of the options given in the answer, we can definitively say that answer (b) is correct as Betty being ahead of at least one person means that she must have more stickers than at least one other person.

2.

The admission fee for a certain museum is shown in the table below.

Guests are also able to get a guided tour for an additional cost.

Age group	Admission fee	Additional cost for a guided tour
Adult (18 y/o and above)	\$25	\$16
Child (6-17 y/o)	\$18	\$12
Child (below 6 y/o)	\$12	\$8
Family (2 adults 2 children below 18 y/o)	\$70	\$48

One 16-year-old boy wanted to go to this museum.

1. How much does he have to pay for an admission fee with an additional guided tour?

\$28

\$30

1/1

☐
\$38☐
\$40**Question Feedback:**

Admission fee + Guided tour = \$18 (Admission) + \$12 (Guided tour)
= \$30

This is answer (b).

3.

Dylan and Nicole want to use a code to send secret messages to each other. In the code, each letter of the alphabet is represented by a one-digit number as shown below.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6

For example, the word BOSS would be written in the code as 2-5-9-9.

Dylan writes four words in the code and sends them to Nicole. When Nicole decodes them, she gets the following words: HILL, RISE, CANE and REST.

Nicole is confident she correctly decoded three of the four words, but she is unsure about one.

1. Which word is she most likely unsure about?

0/1

HILL

RISE

CANE

REST

Question Feedback:

To be uncertain of the code, there would have to be many likely answers. This basically means that numbers which show up more frequently will get confusing for the person receiving the code. In this case we can see that numbers 1 – 6 can be seen 3 different times throughout the alphabet and could get confusing.

HILL: 8-8-2-2

RISE: 8-9-9-5

CANE: 3-1-4-5

REST: 8-5-9-0

In this case answer (c) would be what Nicole is unsure about as all the letters come from that 1 – 6 range, which means there are 3 possible variations for each letter. The other options have fewer total variations, and hence Nicole is most unsure with option (c).

4.

Farmer Joe counted 38 legs and 12 heads among the animals on his farm. He only has cows and chickens on his farm and they each have 4 legs and 2 legs respectively.

1. How many more of one animal does he have on his farm than the other?

0/1

1

2

3

4

Question Feedback:

Test out 6 of each animal:

$$6 \text{ cows} + 6 \text{ chickens} = 6 \times 4 + 6 \times 2$$

$$= 24 + 12$$

$$= 36 \text{ legs}$$

This is almost our targeted number of legs. Since we need more legs, just increase the number of cows by 1 and decrease the number of chickens by 1.

Test out 7 cows and 5 chickens:

$$7 \text{ cows} + 5 \text{ chickens} = 7 \times 4 + 5 \times 2$$

$$= 28 + 10$$

$$= 38 \text{ legs}$$

This shows that there is only a difference of 2 between cows and chickens.

This is answer (b).

5.

"When it is raining, public transport such as buses and trains always experience delays. Thus, on these days, many people prefer to drive to their destination to avoid public transport delays."

Hayley: It is raining this morning. I should probably drive my car to work rather than public transport if I want to avoid being late to work.

1. If the quoted paragraph is true, which of the following shows the mistake Hayley has made?

1/1

On rainy days the traffic is likely to be worse due to more people driving

Driving does not guarantee that Hayley will not be late to work

Driving is more dangerous in wet weather compared to dry weather

It may stop raining by the time Hayley needs to travel to work

Question Feedback:

The mistake made by Hayley is that she has wrongly assumed that driving will be faster than public transport on rainy days. It was not mentioned that people who drive to work will arrive on time. Instead, it could be more jam packed if more people decide to take their car during the rainy weather.

This is best seen by answer (b).

6.

Questions 6 and 7 refer to the following information.

Daxton the dog is being trained to become an airport security dog. Each day of his first training week, he was given sample suitcases to test his ability to detect the presence and absence of drugs.

The following table shows how many sample suitcases he was given each day.

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
15	26	20	25	24	3

The graph below shows the percentage of sample suitcases that Daxton correctly identified each day.

0/1

1. On which two days did Daxton correctly identify the same number of luggage?

Friday and Sunday

Tuesday and Thursday

Thursday and Friday

Saturday and Sunday

Question Feedback:

In order to figure this out we must find out how many suitcases Daxton identified for each day.

Monday = $40\% \times 15 = 6$ suitcases

Tuesday = $50\% \times 26 = 13$ suitcases

Wednesday = $50\% \times 20 = 10$ suitcases

Thursday = $60\% \times 25 = 15$ suitcases

Friday = $75\% \times 24 = 18$ suitcases

Saturday = $80\% \times 30 = 24$ suitcases

Sunday = $90\% \times 20 = 18$ suitcases

From this we can see that on Friday and Sunday, Daxton managed to identify the same number of suitcases.

This is answer (a).

7.

Questions 6 and 7 refer to the following information.

Daxton the dog is being trained to become an airport security dog. Each day of his first training week, he was given sample suitcases to test his ability to detect the presence and absence of drugs.

The following table shows how many sample suitcases he was given each day.

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
15	26	20	25	24	30

The graph below shows the percentage of sample suitcases that Daxton correctly identified each day.

0/1

1. Each day, for every 5 samples of luggage that Daxton correctly identified, he was given a treat. How many treats did Daxton earn over the whole week?

☐

13

☒

15

✗

☐

18

✓

☐

20

Question Feedback:

Sort the days into sets of 5 and find how many treats he got.

Monday = 1 treat

Tuesday = 2 treats

Wednesday = 2 treats

Thursday = 3 treats

Friday = 3 treats

Saturday = 4 treats

Sunday = 3 treats

Total Treats = $1 + 2 + 2 + 3 + 3 + 4 + 3$

= 18 treats

This is answer (c).

8.

Several squares can be placed together with their sides touching to produce a new, larger form of the same shape, as shown below.

The shapes can be rotated and/or flipped to achieve this.

1. Which of the following shapes DOES NOT have this property?

0/1

Question Feedback:

This shows how the shapes can create a larger form of themselves. Only answer (a) cannot do that.

9.

"Petrol cars are slowly being phased out in favour of hybrid electric cars as car manufacturers claim they are cheaper as they cost less to run even though they are sold at a higher price."

1. Which of the following sentences, if true, most weakens the above argument?

☐

Petrol cars have been around since the early 1900s

☐

Diesel cars were phased out by petrol cars for a similar reason

1/1

The price paid for petrol over the lifetime of a car is usually less than the price difference between a petrol and hybrid electric car

Hybrid electric cars are much more popular now in the mainstream market

Question Feedback:

Out of the given options, answer (c) is best for weakening the argument as it gives us the reason that the petrol needed over the full use of a car will be less than the amount it is needed to go from a petrol car to a hybrid car. Thus, answer (c) suggests that a petrol car would be the better option to buy, hence weakening the argument.

This is answer (c).

10.

The diagram shows a view of four dice on top of a glass table. They are standard dice, with all pairs of opposite faces adding up to 7.

1. Oscar and Melissa observe the dice from underneath the glass table. Oscar adds the numbers on the white dice whilst Melissa adds the numbers on the black dice. What is the difference between their sums?

☐

0

☒

1

☐

2

☐

3

Question Feedback:

The sides shown on the bottom of the white dice will be 1, 6, 3 so a total of 10. The sides shown on the bottom of the black dice will be 5, 2, 4 so a total of 11. This means the difference between their sums is $11 - 10 = 1$.

This is answer (b).

11.

Which the following nets could not be folded to form a 3D shape with no gaps or holes?

1. Answer:

1/1

**Question Feedback:**

Answers (a), (b) and (c) can create a closed shape, with a triangular pyramid, a hexagonal prism and a cylinder, whereas answer (d) has fold lines at very odd angles which would create random pockets which do not close and complete the shape.

This is answer (d).

12.

Leon is a janitor who is paid a fixed hourly wage. The graph below shows his wages from Monday to Friday.

His pay is shown in the table below:

Day	Pay(\$)
Mon	150
Tue	?
Wed	70
Thu	90
Fri	180

1/1

1. Which of the following could have been the amount he was paid on Tuesday?

☐

\$60

☐

\$80

**Question Feedback:**

Leon was paid \$150 on Monday, and this amount covers 7.5 segments on the bar graph. To find the value of one segment, divide:

$$\$150 \div 7.5 = \$20$$

So, each segment represents \$20. On Tuesday, the graph shows 6 segments, so his pay was:

$$6 \times \$20 = \$120$$

Therefore, Leon was paid \$120 on Tuesday.

This is answer (c).

13.

Four friends had a race to see who could run one lap of the park the fastest.

Everyone finished the lap before Paul did.

Lucy did not finish the lap first.

Ivan finished the lap after Rebecca.

1. Where did Rebecca finish?

1/1

3rd

4th

Question Feedback:

Order: FIRST – Rebecca – Ivan/Lucy – Lucy/Ivan – Paul – LAST

From the information given, we know that Rebecca would have finished first.

This is answer (a).

14.

“At a voting venue, there are cardboard walls put up between voting stations to prevent people from being able to look at each other’s votes.”

Henry: The walls that are put up between voting stations are useless. After all, a person votes based on their personal preference, meaning that there are no right or wrong answers. Thus, there is no reason for people to bother copying someone else’s votes.

1. If the quoted paragraph is true, which of the following shows the mistake Henry has made?

The cardboard walls may not be good at preventing people from copying

The cardboard walls may be for privacy and not to prevent copying

0/1

If many people copy others' votes, the election may have to be redone

Some people might need guidance on which candidate is best to vote for

Question Feedback:

The mistake in Henry's reasoning is that he has wrongly assumed that the cardboard walls are there to stop copying when they could be used for a completely different use such as giving people privacy when making their votes.

This is answer (b).

15.

Xavier is playing a computer game which controls a pet dog on the screen. He presses different letters on his keyboard which makes the pet dog do different functions, as shown below.

A = "Go"

B = "Stay"

C = "Turn left"

D = "Turn right"

1. Xavier wants his pet dog to "turn left," then "go," then "turn right." Which letters should he press on the keyboard to make this happen in the correct order?

1/1

C, A, D

B, C, D

A, B, C

D, C, A

Question Feedback:

Turn left = C

Go = A

Turn right = D

Therefore, the buttons Xavier must press in order are: C, A, D.

This is seen as answer (a).

16.

A piece of a 3D puzzle is shown below.

Four smaller pieces are also shown below.

1

2

3

4

1. Which two of the above pieces will fit together with the first piece to form a cube?

0/1

1 and 2

1 and 3

2 and 3

3 and 4

Question Feedback:

Pieces 2 and 3 would both make up the necessary pieces needed to finish the shape as the 3-pointed piece fits from the bottom, while the zigzag shape slots in at the top and completes the cube.

This is answer (c).

17.

Britney is planning to move into a new apartment. After going apartment hunting, she has narrowed down her choices to 4 different apartments. Since she commutes to work via train every day, she wants an apartment as close as possible to the train station. However, she cannot afford the apartment with the highest rent.

Apartment 1 is further from a train station than Apartment 2, but it is closer to the train station than Apartment 3. The rent for Apartment 3 is less than the rent for Apartment 2. The rent for Apartment 1 costs more than the rent for Apartment 2, but not as much as the rent for Apartment 4.

1. Which of the four apartments should Britney choose?

Apartment 1

Apartment 2

Apartment 3

Apartment 4

Question Feedback:

Distance order: TRAIN – Apartment 2 – Apartment 1 – Apartment 3

Cost: \$\$ \$\$\$ \$

We can eliminate Apartment 4 regardless of position, as it is the most expensive apartment. The best choice for Britney would be Apartment 2 as it is the closest to the train stations whilst not being the most expensive apartment.

This is answer (b).

18.

"A certain boarding school runs every day except during the month of December. During school days, students must wear school uniform. However, students do not have to wear school uniform on their birthday and can wear their normal, casual clothes instead. On all other school days, all students must wear the school uniform."

Francis: If a student at the boarding school is not wearing the school uniform on a school day while all the other students are, that must mean it is their birthday.

Linda: Each student at the boarding school has at least one school day where they do not have to wear the school uniform.

1/1

1. If the quoted paragraph is true, whose reasoning is correct?

Francis only

Linda only

Both Francis and Linda

Neither Francis nor Linda

Question Feedback:

Francis' statement is correct as the only instance where they are allowed to wear casual clothes is on their birthday.

Linda's statement is incorrect as people whose birthdays are during December don't need to go to school since it doesn't run during that time. This means that some students will have to wear school uniform on every school day.

Since only Francis is correct, the answer is (a).

19.

No matter how good the quality of products is at a store, if the customer service is poor, people will be significantly less willing to purchase from them. Thus, new staff must be trained on how to treat customers well or the store will suffer lower sales.

1. Which one of the following, if true, most weakens the above argument?

1/1

Prices of similar items are typically the same across different stores

It is difficult and tiring for staff to always act friendly towards customers

When paying higher prices for a product, customers expect better quality

When shopping, customers are most concerned about price

**Question Feedback:**

The argument is that customer service is really important regardless of the quality of

product. Options (a) and (c) are irrelevant. Option (b) weakens the argument by saying that it is difficult to be friendly, however option (d) is much better at weakening as it shows that there are more important things to focus on rather than customer service.

Hence the answer is option (d).

20.

Transport Officer: "No one is allowed to consume food or drink other than water on public transport. This is because before this rule was enforced, many people would leave their rubbish behind which led to complaints about messiness."

Timothy: If this rule is followed by all passengers on public transport, there will be no more complaints about messiness on public transport.

1. If the quoted paragraph is true, which of the following shows the mistake Timothy has made?

1/1

It may be very difficult to get everyone to follow public transport rules

People may not always complain when public transport is messy

There may be other causes of messiness on public transport

People's complaints about public transport may not always be about messiness

Question Feedback:

The mistake in Timothy's statement is that he has wrongly assumed that the only way that mess can appear on the train is from food and drinks when it could come from other places such as people's shoes and what they are dragging along as they step onto the train.

This is answer (c).

21.

Below is a patterned square tile, with a corner cut out.

1. Which of the following will complete the tile such that it is symmetrical along the dotted line?

1/1

**Question Feedback:**

This is seen as answer (d). Answers (b) and (c) have the wrong corner, and answer (a) needs a different coloured circle.

22.

Jacob has a six-digit code for his bike lock.

The two-digit number formed by the last two digits of the code is equal to the result from multiplying the first two digits together.

The two-digit number formed by the middle two digits is a third of the number formed by the last two digits.

The second digit of the code is 4 and all six digits are different.

1. What is the fifth digit of the code for Jacob's bike lock?

☐

1

☐

2

☒

3

☐

5

1/1

Question Feedback:

From the information we can kind of figure out the last 2 digits of the number. We know it is a multiple of 4 since the 2nd number is a 4 and that it is a multiple of 3 since the middle number must be a third of the number formed from the last 2 digits.

Multiples of 4 and 3: 12, 24, 36, 48

It cannot be 24 or 48 since 4 is already being used. We know it can't be 12 since a third of that gives us a 4, which is already used. This means the last 2 digits of the number must be 3 and 6 and the middle digits must be 1 and 2.

We also know that $4 \times 9 = 36$, which means the very first digit is 9.

CODE: 9 – 4 – 1 – 2 – 3 – 6

This means that the fifth digit is 3.

This is answer (c).

23.

Sugar is one of many ingredients added to baked goods that gives it an enjoyable taste. Sugar provides a sweet taste which can be addictive to consumers and cause them to buy more and more of the baked good.

Sam: "This baked good is loaded with sugar hence it will have an enjoyable taste."

1. Which of the following is the best statement of the flaw in the argument above?

Too much sugar is unhealthy

There are other factors in making baked goods have an enjoyable taste

Sam does not enjoy eating baked good

Consumers can find sugar in a variety of different foods

1/1

Question Feedback:

The flaw in Sam's argument is that he has incorrectly assumed that sugar is the only ingredient that makes a baked good taste good. However, other ingredients, such as butter, chocolate, fruit, or spices, could also contribute significantly to the taste.

This is answer (b).

24.

Rachel has three VHS tapes and one film reel which she wishes to convert to DVD. She also wants to convert the film reel to an mp4 file. The prices for conversions are shown in the table below.

		Transfer from		
		VHS tape	Film Reel	Camcorder Tape
Transfer to	Blu-Ray	\$3	\$6	\$6
	DVD	\$4	\$8	\$4
	mp4 File	\$1	\$3	\$2

1. What will be the total cost of the conversions?

1/1

☐

☐

☐

☒

Question Feedback:

Cost = 3 x VHS to DVD + 1 x Film reel to DVD + 1 x Film reel to Mp4 file

$$= 3 \times \$4 + 1 \times \$8 + 1 \times \$3$$

$$= \$12 + \$8 + \$3$$

$$= \$23$$

This is answer (d).

25.

Greg is making cordial. The recipe says to mix 2 cups of water with 1 cup of cordial concentrate. Greg planned to use 1 cup of cordial concentrate, so he would make 3 cups of cordial altogether. By mistake, Greg used 2 cups of cordial concentrate instead. He added enough water to keep the same recipe.

1. How much more cordial did Greg make than he originally planned?

☐

1 cup

☐

2 cups

☒

3 cups

☐

4 cups

1/1

Question Feedback:

Greg originally planned to use 1 cup of cordial concentrate. Since the recipe says to mix 2 cups of water with 1 cup of cordial concentrate, he would have made:

$1 \text{ cup} + 2 \text{ cups} = 3 \text{ cups of cordial.}$

However, Greg accidentally used 2 cups of cordial concentrate. To keep the same ratio, he needed to add 4 cups of water. This means he actually made:

$2 \text{ cups} + 4 \text{ cups} = 6 \text{ cups of cordial.}$

To find how much more cordial he made, subtract the original amount from the actual amount:

$6 \text{ cups} - 3 \text{ cups} = 3 \text{ cups}$

Therefore, Greg made 3 cups more cordial than he originally planned.

This is answer (c).

26.

Jason really wants a new guitar because his current model is outdated.

Jason cannot afford a new guitar by himself. The only way he can get a new one is if his parents buy him one. However, they will only buy him one if he does well in his upcoming exams. Jason will not do well in his upcoming exams if he does not study hard for them.

1. Which of the following outcomes is NOT possible?

☐

Jason is still using his outdated guitar model even though he did well in his exams

☐

Jason did not get a new guitar even though he did well in his exams

☒

Jason got a new guitar model even though he did not study hard for his exams

☐

Jason studied hard for his upcoming exams but still did not do well

Question Feedback:

Only option (c) is impossible as not studying hard for his exams would mean that he does not do well in the exams. This would result in his parents not buying the guitar as that is the only way in which he could have gotten a new guitar.

This is answer (c).

27.

1/1

A certain school asked their students to fill out a survey on the subjects they studied. They discovered that:

- All students who studied English also studied Science.
- Students who studied Science also studied Maths.
- Students who did not study Science also did not study English.

1. We know that Gina studies Science. Which one of the following statements is true?

1/1

We only know that she also studies Maths

We know that she also studies Maths, but not English

We know that she also studies both English and Maths

We know that she also studies English, but not Maths

Question Feedback:

Since Gina studies Science, we definitively know that she studies Math. We do not know if she studies English, since studying English means that she studies Science but starting off studying Science does not mean she studies English.

This is best seen as answer (a).

28.

For the last four years, four of the top schools in the state have been competing in a sports competition. The schools are Northview, Ravenwood, Somerset and Acadia. No school has been crowned the winner more than once.

Two years ago, Northview won, with Ravenwood being the runner-up. Last year, Ravenwood did not perform as well as they did the previous year while Acadia finished the competition in front of Somerset.

1/1

1. Who won the competition last year?

- ☐ Northview
- ☐ Ravenwood
- ☐ Somerset
- ☒ Acadia

Question Feedback:

Possible Order: **WINNER** – Acadia – Somerset – Northview – Ravenwood – **LAST**

This is only a possible order since Northview and Ravenwood could switch positions. Somerset could also swap positions with Northview. However, we knew that Northview could not have won two years in a row and that Ravenwood could not have come 2nd or 1st place. We also know Somerset cannot be 1st since they were beaten by Acadia. This means that Acadia won the competition last year.

This is answer (d).

29.

Vincent cut out the following shape from a square piece of paper.

1. Which of the following must be the leftover shape from his piece of paper?

1/1

**Question Feedback:**

We can see that answer (c) has the exact corners and sides which match the original image and will thus complete the figure.

30.

"To graduate with a medical degree at Middleton University, students must have a grade of at least 70 by the end of their medical program. Otherwise, students will have to repeat the year."

Harriet: I have just graduated with a medical degree at Middleton University with a high distinction overall grade. Thus, I am now more than ready to operate in hospitals alongside other doctors.

Larry: Today is the first day of the last year in my medical program at Middleton University. However, my current overall grade is 68. I will need to repeat this year.

1. If the quoted paragraph is true, whose reasoning is correct?

1/1

☐

Harriet only

☐

Larry only

☐

Both Harriet and Larry

☒

Neither Harriet nor Larry

Question Feedback:

Harriet's statement is incorrect as just graduating may not mean that they are ready to work in hospitals alongside other doctors and could mean that the person is now eligible only for internships.

Larry's statement is incorrect as they have the entire year to improve their grade and if they get an overall grade above a 70, then they will graduate and pass successfully.

Since both statements are incorrect, the answer is (d).

31.

Priscilla has been prescribed a medication by her GP to help with her stomach pain.

The medication has specific instructions. Patients should take one pill before every meal, up to a maximum of three pills a day. However, patients who only eat twice a day should just take their pills with both meals, and not a third time without food. patients who eat more than three meals a day should still only take three pills total. Additionally, this medication is not suitable for patients with seafood allergies. Patients who eat a lot of processed food may experience more side effects than normal but can still take the medication.

Patients who are physically active for more than 30 minutes a day should make sure that one of their pills are taken in the evening, but still ensure they are not exceeding three pills a day.

0/1

1. Priscilla eats twice a day and exercises for 45 minutes daily. How many pills should she take per day?

☐

1

☐

2

☒

3

☐

4

Question Feedback:

Priscilla eats twice a day, so according to the instructions, she should take only two pills, one with each meal. Even though the general maximum is three pills per day, the instructions clearly say that people who eat only two meals should not take a third pill without food.

She also exercises for 45 minutes daily, which means one pill should be taken in the evening, but she still cannot exceed two pills, since she only eats twice.

So, she should take one pill with each meal (one in the morning, one in the evening), satisfying both the meal and exercise guidelines.

This is answer (b).

32.

"Mindy recently suffered from a skin rash that she later found out was caused by an allergic reaction. Mindy is allergic to dust and grass, but she has never had a similar allergic reaction before."

Mindy: The only thing I ate recently that was different to my normal diet is salmon. Since I have never had a similar allergic reaction before, I must be allergic to salmon.

1. If the quoted paragraph is true, which of the following shows the mistake Mindy has made?

☐

Mindy may have had a similar allergic reaction when she was very young

☐

The skin rash may have been previously present but only recently became severe

0/1

Mindy may be allergic to all types of seafood and not just salmon

The allergic reaction that Mindy recently suffered from may not be diet related

Question Feedback:

The mistake in Mindy's statement is that she has wrongly assumed that the allergic reaction is only from what she eats. Instead, it could be due to her environment and some sort of allergy to a product rather than her diet.

This is best seen as answer (d).

33.

Playing any board game can be an excellent way of relieving stress. Board games allow people to slow down and think more carefully, they also provide individuals with a leisure activity to help them take their minds off the stresses of daily life.

1. Which of the following, if true, would most weaken the above argument?

Competitive board games cause stress and tension between players

Most individuals do not currently play board games

Most individuals are stressed

Board games can be difficult to learn

1/1

Question Feedback:

The argument claims that board games are a good way to relieve stress because they help people slow down, think carefully, and take their minds off daily worries.

However, option (a) weakens this argument because it shows that some board games may actually create stress instead of reducing it. If competitive board games cause tension between players, then board games may not always be relaxing or helpful for stress relief.

Hence the answer is option (a).

34.

These days, more and more people are spending their time sitting around instead of moving. This is a growing concern as these people are likely not getting enough activity, which can shorten their lifespan. To ensure people live longer and healthier lives, more emphasis should be placed on regular exercise.

1. Which of the following, if true, most strengthens the above argument?

It is never too late to incorporate diet and exercise into one's routine

Exercising is the best way to boost one's metabolism and become skinny

Regular exercise is linked to a reduced risk of disease

More people work in office jobs compared to manual, outdoor jobs

Question Feedback:

The argument is that people should exercise to live longer and be healthier. Option (d) is irrelevant. Options (a) and (b) do encourage exercising however they are not related to the reason given at all as they do not show any benefits to health. Option

1/1

(c) does strengthen the argument and also demonstrates how it is beneficial to an individual's health if they exercise.

Hence, option (c) is the answer as it most strengthens the argument.

35.

Three suspects, Sam, Sally and Sia are questioned for a theft. Each suspect was interviewed and gave the following responses:

Sam: I committed the theft.

Sally: Sam did not commit the theft.

Sia: I committed the theft.

Two of the three are lying and the other one is telling the truth.

1. Which of the following is true?

☐

Sam is lying

☒

Sam committed the theft

☐

Sia is telling the truth

☐

None of the above

1/1

Question Feedback:

To solve this, we need to remember that two of the three suspects are lying, and only one is telling the truth.

Sam says, "I committed the theft," while Sally says, "Sam did not commit the theft," and Sia also claims, "I committed the theft."

- If we assume that Sam is telling the truth, then his statement is true and he did commit the theft.
- That would mean Sally, who says Sam didn't do it, is lying, and so is Sia, who falsely claims she committed the theft.

This setup gives us exactly one truth and two lies. Therefore, Sam committed the theft.

This is answer (b).

36.

Four students —Abigail, Dylan, Jason, and Tina— were given four different 3D structures made from equally sized cubes. They were told to draw the side view of their structure from any one of the sides. Abigail, Dylan, and Jason all had the same drawing, whereas Tina's was different.

1. Which of the following structures was most likely given to Tina?

0/1

Question Feedback:

From any side view of the shapes (a), (b)

and (d) the others would be able to see this:

However, in shape (c) Tina would see a side view with only 3 cubes:

Hence, the answer is option (c).

37.

Last exam period, the following results were achieved by students studying Chemistry, Physics and Biology.

- Everyone who passed Physics also passed Biology
- No one who failed Biology passed Chemistry
- No one passed all three subjects
- No one failed all three subjects

1. Which one of the following is possible?

0/1

Sam passed both Physics and Chemistry

Sam failed both Physics and Biology

Sam passed Physics but failed Chemistry

Sam failed Biology but passed Physics

**Question Feedback:**

Out of the options given, answer (c) is the only possible one, as passing Physics means he passed Biology and failed Chemistry. This is possible as he did not pass or fail all three subjects.

This is answer (c).

38.

"Driving a car at high speeds is dangerous. It has been shown time and time again by multiple studies that the probability of being involved in a serious accident is 10-fold when you are driving at speeds of above 90 kilometres per hour than if you're not."

Karina: If I do not drive my car at speeds above 90 kilometres per hour I will not get into an accident.

1. Which one of the following sentences shows the mistake Karina has made?

1/1

Karina might not be a safe driver

Karina's car might have mechanical problems

Karina still has a chance of getting into an accident

Karina might be an experience driver

Question Feedback:

The mistake in Karina's statement is that she has wrongly assumed that by being below 90km/hr she would be involved in no car accidents at all. The original argument mentions that the risk is just ten-fold worse when above 90km/hr than below it. This means the risk of being in a car accident when below 90km/hr could still be high, but it is just much worse to be over 90km/hr.

This is answer (c).

39.

In a cooking competition, four amateur chefs were judged on their cooking skills by three different judges. Their scores out of ten from each judge are shown in the table below.

	<i>Judge 1</i>	<i>Judge 2</i>	<i>Judge 3</i>
<i>Chef 1</i>	7	7	5
<i>Chef 2</i>	8	8	5
<i>Chef 3</i>	6	5	6
<i>Chef 4</i>	8	5	7

All sets of scores were added together to determine the final rankings of each chef in the competition.

1. Which chef came 2nd in the competition?

1/1

Chef 1

Chef 2

Chef 3

Chef 4

**Question Feedback:**

Chef 1 = $7 + 7 + 5$

= 19 points

Chef 2 = $8 + 8 + 5$

= 21 points

Chef 3 = $6 + 5 + 6$

= 17 points

Chef 4 = $8 + 5 + 7$

= 20 points

Order: HIGHEST – Chef 2 – Chef 4 – Chef 1 – Chef 3 – LOWEST

From this we can see that Chef 4 came 2nd overall.

This is answer (d).

40.

Alex is ranking suits at a store based on price and comfort

- The grey suit is more comfortable than the black suit but is the most expensive
- The black suit is cheaper than the white suit

- The white suit is not as comfortable as the black suit

1. Which of the following is true?

☐

The white suit was the cheapest

☐

The black suit was the least comfortable

☒

The black suit is the cheapest

☐

None of the above

1/1

Question Feedback:

Ranking Alex's suits:

Cost (cheapest to most expensive): FIRST- Black – White – Grey – LAST

Comfort (most to least comfortable): FIRST – Grey – Black – White – LAST

This is answer (c).
