If you are looking for feedback on your child's progress and next steps, parents can just approach and speak with their tutor after class.

Summary	Mark
Reading	33/38
Mathematical Reasoning	26/35
Thinking Skills	31/40
Writing	19/25
Overall Rank	54/379
Gender Rank	19/186

Note: Highlighted band in light blue indicates the percentile band your child performed in.

The following table shows the selective schools ranked aligned with the Gender Parity model. The colour coding is an indication of the attainability given your child's performance in this exam.

Red -> Difficult

Orange -> Attainable

Green -> Safe Option

Schools denoted with a '(P)' are partial selective schools.

Student Percentile: 85.75%

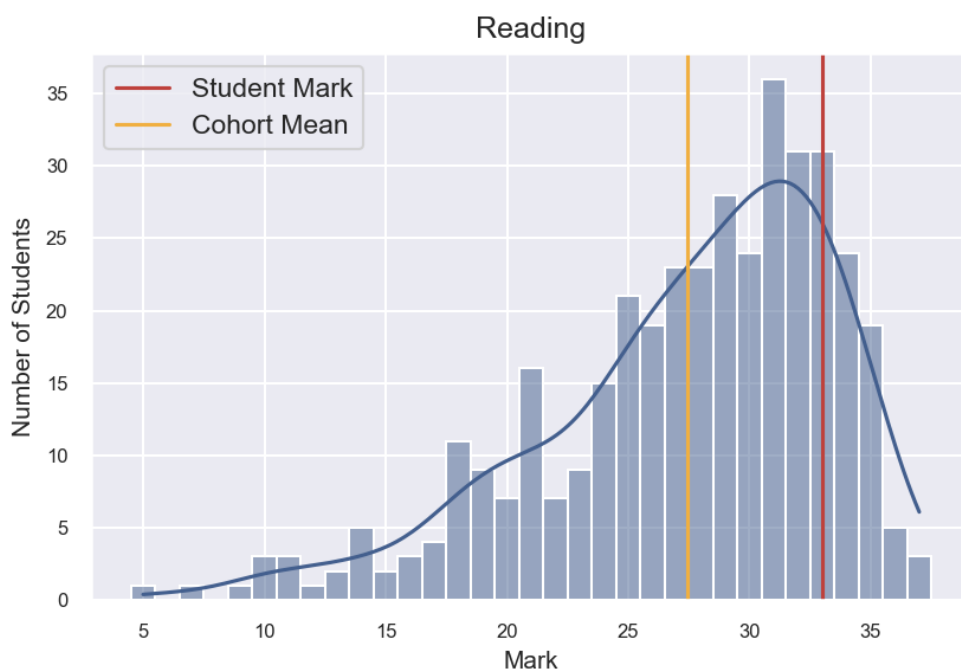

The table below is specific to your child's gender: Female

Rank	School
1	James Ruse Agricultural High School
2	Baulkham Hills High School
3	North Sydney Girls High School
4	Sydney Girls High School
5	Hornsby Girls High School
6	Girraween High School
7	Fort Street High School
8	Northern Beaches Secondary College - Manly Campus
9	Chatswood High School (P)
10	Penrith High School
11	Parramatta High School (P)
12	Hurlstone Agricultural High School
13	St George Girls High School
14	Ryde Secondary College (P)
15	Caringbah High School
16	Blacktown Girls High School (P)
17	Sefton High School (P)
18	Gosford High School
19	Merewether High School
20	Tempe High School (P)
21	Leichhardt Campus - Sydney Secondary College (P)
22	Richmond High School - Richmond Agricultural College (P)
23	Smiths Hill High School
24	Macquarie Fields High School (P)
25	Prairiewood High School (P)
26	Alexandria Park Community School (P)
27	Balmain Campus - Sydney Secondary College (P)
28	Bonnyrigg High School (P)
29	Moorebank High School (P)
30	Rose Bay Secondary College (P)
31	Elizabeth Macarthur High School (P)
32	Auburn Girls High School (P)
33	Armidale Secondary College (P)
34	Koorringal High School (P)
35	Grafton High School (P)
36	Peel High School (P)
37	Gorokan High School (P)
38	Karabar High School (P)

Reading Test 5 Solutions

1. B

“Now you see the real Greece” and “pulling up to an ancient stone house”: This shows that Grandfather is referring to the older and more traditional parts of Greece, rather than modern cities or tourist attractions.

“Grandfather gestured to the crumbling stone buildings that surrounded them” and “You see the town. Is very old”: This further suggests that the “real Greece” refers to the traditional buildings, villages and historical places that Grandfather wants Phoebe to experience.

Therefore, the answer is Option **B**.

2. D

“I’m only half Greek. Really, I’m American”: This shows that Phoebe sees herself as American because she was born and brought up there.

“The toilets had buttons instead of handles” and “she could hardly even talk to people”: This shows that Greece feels unfamiliar to Phoebe because the language and everyday ways of living are different from what she is used to.

Therefore, the answer is Option **D**.

3. A

“You know, they made these towns like a labyrinth” and “Because of the foreign pirates”: This suggests that the pirates were outsiders who threatened the Greek towns.

“her grandfather didn’t really trust anyone who wasn’t Greek”: This further suggests that Grandfather’s dislike of the pirates is most likely connected to the fact that they were foreign.

Therefore, the answer is Option **A**.

4. B

“The answer was that Nadia’s parents were from Karachi, Pakistan” and “But Nadia wasn’t from Pakistan. She was from Teaneck, New Jersey”: This shows that Phoebe sees Nadia as American because Nadia grew up in America.

“She’s American,” Phoebe said at last. “Like me.”: This also shows that Phoebe connects identity to where someone belongs and lives, not only where their family originally came from.

Therefore, the answer is Option **B**.

5. C

“Grandfather looked at her sharply” and “Phoebe half expected him to tell her again that she was Greek, not American”: This shows that Phoebe was nervous because she thought Grandfather might disagree with her again about being American.

“Phoebe exhaled. She hadn’t even realised she was holding her breath”: This suggests she felt tense while waiting for Grandfather’s reaction.

Therefore, the answer is Option C.

6. D

“Pretty girl,” he said finally. He looked back at Phoebe, and something in his eyes softened”: This shows that Grandfather reacts kindly instead of arguing with Phoebe.

“My grandfather loves me” and “he wants to share being Greek with me”: This helps Phoebe see Grandfather differently and understand that his strong feelings about Greece come from love, not just criticism.

Therefore, the answer is Option D.

7. A

“Vasiliki turned to Grandfather, wide-eyed with horror” and “She don’t speak Greek!”: This shows that Vasiliki is shocked when she learns that Phoebe cannot speak Greek.

“It’s OK,” Vasiliki said sympathetically. “I try to speak English with you.”: This shows that although she is surprised, she still responds kindly and tries to communicate with Phoebe.

Therefore, the answer is Option A.

8. C

“A minute, two minutes pass. He takes another glance at the drunk, who has not moved” and “That was when I first got the feeling there was something wrong”: From this, we can see that the coast guard approached the drunk man because the drunk man was not moving so he wanted to see if he was alright.

Therefore, the answer is Option C.

9. B

“The coast guard watches him and grins when the man decides to light a cigar” and “He laughs as he sees the fellow lose his balance and reel backwards at an impossible angle”: This shows the coast guard initially felt amused towards the drunk man.

“That was when I first got the feeling there was something wrong” and “Quick! A crime ... I don’t know ...”: This shows the coast guard felt panicked for the drunk man towards the end of the excerpt.

Therefore, the answer is Option B.

10. C

The omniscient third person narrator is narrating the day of the crime, essentially positioning the reader to “discover” the case alongside the main narrator (who is absent from this excerpt). There is no “actual hearing” happening in “real time.”. Additionally, “the coast guard said later, at the hearing” indicates that the hearing takes place in the future rather than the present time of the narrative.

Therefore, the answer is Option C.

11. D

“comings and goings that followed” = events of the incident
“harder to establish in chronological order” = unsure of the timing of events
Basically, it means that the coast guard was not sure of the timing of events of the incident.

Therefore, the answer is Option D.

12. D

“The coast guard watches him and grins when the man decides to light a cigar. A comic struggle then develops between the drunk and the wind” and “Ten matches are blown out”: This suggests that the wind is making it difficult for the drunk man to light his cigar as the wind keeps blowing out his matches.

Therefore, the answer is Option D.

13. D

“Quick! A crime ... I don’t know ...”: The drunk man has been shot and we can see that the coast guard was panicking and didn’t know what to do as they entered the cafe. The most logical next event would be the other characters reacting to the news.

Therefore, the answer is Option D.

14. C

“Then he notices a hole in the drunk’s overcoat and a thick fluid flowing from the hole”: This is most likely imagery of a gunshot wound and blood, suggesting the drunk man was shot.

Therefore, the answer is Option C.

Question 15

a. G

This paragraph focuses on the wide range of medical specialties, such as cardiology and neurology, and explains how doctors concentrate on specific areas of care. The main idea is the diversity within medicine and how specialisation allows for expertise. Therefore, the best summary is that the medical field includes many specialised areas.

Therefore, the answer is Option **G**.

b. D

The paragraph outlines the process of becoming a doctor, including completing a medical degree, internships, and further training. It highlights the length and difficulty of this journey. The central idea is the time and effort required to qualify, making the summary about years of study, and training the most accurate.

Therefore, the answer is Option **D**.

c. E

This paragraph describes the varied daily responsibilities of doctors, including seeing patients, performing surgeries, conducting research, and teaching. It emphasises that a doctor's role can differ significantly depending on their position. Therefore, the best summary is that doctors perform a wide range of tasks depending on their roles.

Therefore, the answer is Option **E**.

d. C

The paragraph discusses advancements in medical technology, such as robotic surgery and telemedicine, and how these innovations have improved diagnosis and treatment. The focus is clearly on how modern developments have transformed healthcare. Thus, the summary about medical technology changing diagnosis and treatment is the best fit.

Therefore, the answer is Option **C**.

e. B

This paragraph highlights the importance of communication in medicine, particularly in explaining conditions and treatments to patients. It also mentions building trust and working with other professionals. The key idea is clear communication, so the best summary is that doctors must communicate effectively to ensure understanding and trust.

Therefore, the answer is Option **B**.

f. H

The paragraph explains the various challenges faced by healthcare systems, including rising costs, staff shortages, and increasing demand. It also touches on the stress experienced by doctors. The main focus is these ongoing pressures, so the summary about healthcare systems facing difficulties is the most appropriate.

Therefore, the answer is Option **H**.

g. F

This paragraph focuses on preventing illness through methods such as vaccinations, healthy lifestyles, and regular screenings. It explains how prevention improves public health and reduces the need for treatment. Therefore, the best summary is that preventing illness is a key focus in maintaining public health.

Therefore, the answer is Option **F**.

h. A

The paragraph explains how doctors work alongside nurses, pharmacists, and other professionals to provide patient care. It emphasises collaboration and shared responsibility in achieving good outcomes. The central idea is teamwork, making the summary about collaboration between healthcare professionals the correct answer.

Therefore, the answer is Option **A**.

Question 16

a. E

The stairs all creak and there are no curtains on any of the windows and all the main rooms seem huge after what I'm used to ...

The first paragraph provides a description of the house, so it would be appropriate for sentence 15 to be a description of the stairs and windows.

Therefore, the answer is Option **E**.

b. A

The bathrooms turned out to be pretty oldy worldy too or maybe I should say antique and *make a huge noise whenever you want to do anything private*.

The second paragraph is about a bathroom, so it would be appropriate for sentence 16 to mention doing something private. People do private things in the bathroom.

Therefore, the answer is Option **A**.

c. C

Behind the house is tons of farmland, some of which looks just like meadows and *some of which is planted with potatoes* and some is just starting to bloom in an acidic yellow color which Edmon says is rape as in rapeseed oil.

The third paragraph describes the farmland, so it would be appropriate for sentence 17 to mention something farm-related such as potatoes. Furthermore, following the trend, sentence 17 should start with the word "some".

Therefore, the answer is Option **C**.

d. B

But they keep sheep and goats and cats and dogs and chickens for decoration said Osbert in a slightly sneery way ...

The sentence after sentence 18 mentions "for decoration", so it would be appropriate for sentence 18 to mention things that could potentially be decorations. Looking at the available options, it is likely that the decorations are sheep, goats, cats, dogs, and chickens.

Therefore, the answer is Option **B**.

e. G

... and someone made cups of tea and then they all stared at me *like I was something interesting they'd ordered from a zoo* and asked me lots of questions ...

Out of the available options, the only sentence that flows correctly and logically after "they all stared at me ..." is "like I was something interesting they'd ordered from a zoo".

Therefore, the answer is Option **G**.

f. D

... and all the time looking at me with his almost smiling look and though I didn't think much about this at the time, *I noticed Isaac looking at Edmond in a funny way*.

Out of the available options, the only sentence that flows correctly and logically after "I didn't think much about this at the time ..." is "I noticed Isaac looking at Edmond in a funny way". It would be odd for the protagonist to think that he "didn't quite like Edmond" at that particular time.

Therefore, the answer is Option **D**.

Question 17

a. A

Excerpt A

“This location was completely burnt” and “Flames devoured more than 20 percent of Australia’s temperate forest cover”: This shows that Excerpt A mentions damage caused by fires.

Therefore, the answer is Option **A**.

b. C

Excerpt C

“... spikes in CO₂ release coincided with the biggest earthquakes” and “CO₂ rising toward Earth’s surface can change pressure along faults to trigger earthquakes”: This shows that Excerpt C describes how a type of natural disaster may occur.

Therefore, the answer is Option **C**.

c. B

Excerpt B

“Tornadoes are outgrowths of powerful thunderstorms that appear as rotating, funnel-shaped clouds”: This shows that Excerpt B explains what a specific type of natural disaster is.

Therefore, the answer is Option **B**.

d. A

Excerpt A

“... there is a possibility this species is extinct” and “... more than 500 species of plants and animals may now be endangered”: This shows that Excerpt A describes the extinction of plants and animals.

Therefore, the answer is Option **A**.

e. D

Excerpt D

“In a typical year, he’d be slashing through large amounts of water amid lush, green rice plants. But today the soil lies naked and baking in the 35° Celsius heat during a devastating drought”: This shows that Excerpt D compares conditions caused by disasters to normal conditions.

Therefore, the answer is Option **D**.

f. B

Excerpt B

“Because of the unpredictable nature of tornadoes and severe storms, it’s normal for people to experience emotional distress. Feelings such as overwhelming anxiety, trouble sleeping, and other depression-like symptoms...”: This shows that Excerpt B alludes to the emotional impact of natural disasters.

Therefore, the answer is Option **B**.

g. D

Excerpt D

“...forced farmers like Rystrom ... to slash their water use” and “We’ve had to cut back between 25 and 50 percent”: This shows that Excerpt D provides an example of an individual impacted by the disaster.

Therefore, the answer is Option **D**.

h. C

Excerpt C

“Understanding the relationship between CO₂ and seismicity could someday lead to better earthquake forecasts”: This shows that Excerpt C alludes to how understanding the cause of a disaster can help predict them.

Therefore, the answer is Option **C**.

i. B

Excerpt B

“They can vary in speed dramatically from being stationary to 70 miles per hour” and “... tornadoes are typically 500 feet across and travel on the ground for five miles”: This shows that Excerpt B uses the imperial system to describe the size of a natural disaster.

Note:

Imperial system – feet, yard, miles, etc.

Metric system – cm, km, m, etc.

Therefore, the answer is Option **B**.

j. A

Excerpt A

“Flames devoured more than 20 percent of Australia’s temperate forest cover”: This shows that Excerpt A describes how a fifth of Australia’s forest were destroyed. 20 percent is one-fifth.

Therefore, the answer is Option **A**.

Mathematical Reasoning Test 5 Answers

1. A

“22 people, each person receives 10 blueberries”: 22×10

“with 18 blueberries leftover”: $+ 18$

“When a total of 238 blueberries are shared”: $= 238$

Combine: $22 \times 10 + 18 = 238$

Therefore, the answer is Option A.

2. A

Since there are a total of 16 pink marbles, if the pink marbles were taken out, there would be $60 - 16 = 44$ yellow and red marbles.

If the pink marbles were taken out, the probability of picking a yellow marble is 75%, meaning there are 0.75×44 marbles = 33 yellow marbles.

This leaves $44 - 33 = 11$ red marbles.

Therefore, the answer is Option A.

3. E

Different combinations = 9 yoghurt flavours $\times$ 18 sugary toppings $\times$ 5 fruity toppings
= 810 different combinations of frozen yoghurt orders.

Therefore, the answer is Option E.

4. C

(a) $58 \div 6 = 9$ remainder 4

(b) $40 \div 6 = 6$ remainder 4

(c) $44 \div 6 = 7$ remainder 2 (different remainder)

(d) $22 \div 6 = 3$ remainder 4

(e) $46 \div 6 = 7$ remainder 4

Therefore, the answer is Option C.

5. C

Pattern is to multiply the previous number by 3 and add 1.

$$3 \times 3 + 1 = 10$$

$$10 \times 3 + 1 = 31$$

$$31 \times 3 + 1 = 94$$

$$94 \times 3 + 1 = 283$$

$$283 \times 3 + 1 = 850$$

Therefore, the answer is Option C.

6. E

The size of the smaller angle as shown on the protractor is $115^\circ - 15^\circ = 100^\circ$.

Since a full circle is 360° , the size of the larger angle must be $360^\circ - 100^\circ = 260^\circ$.

Therefore, the answer is Option E.

7. B

If Sophie ate 6 strawberries, then Paula ate $(6 \times 3) + 4 = 22$ strawberries.

Together, Sophie and Paula ate $6 + 22 = 28$ strawberries, meaning Cinar must have eating $28 \div 2 = 14$ strawberries.

Hence, there must have been $6 + 22 + 14 = 42$ strawberries in the box.

Therefore, the answer is Option B.

8. B

$$5U - 45 = 15$$

$$5U = 15 + 45 = 60$$

$$5U = 60 \rightarrow U = 60 \div 5 = 12$$

Since we now know $U = 12$,

$$2R - U = 10$$

$$2R - 12 = 10$$

$$2R = 22 \rightarrow R = 22 \div 2 = 11.$$

Thus, $R + U = 12 + 11 = 23$.

Therefore, the answer is Option B.

9. A

To determine the latest time that Kim should start to prepare to leave his house, we should assume that it takes Kim 33 minutes to prepare his lunch and 1.5 hours to drive to his workplace.

In total, it takes Kim 33 minutes + 8 minutes + 1.5 hours = 131 minutes (2 hrs 11 mins) to arrive at his workplace from the time he starts preparing to leave the house.

Thus, Kim must leave his house at 8:55 am – 2hrs 11 mins = 6:44 am at the latest.

Therefore, the answer is Option A.

10. A

$11 + 12 + 13 = 36$, so the total of each row, column, and diagonal must add up to 36.

Bottom row, right column: $36 - (11 + 16) = 9$

Middle row, right column (?): $36 - (13 + 9) = 14$

		13
	12	? 14
11	16	9

Therefore, the answer is Option A.

11. B

To find the cheapest way for John to print 12 large-sized documents, we need to compare the pack options and prices from the table.

For the 12 large documents, the cheapest option is to buy a 15-pack for \$21. This gives him slightly more than needed, but it's still cheaper than combining two 10-packs or buying a 30-pack.

This means that it will cost him \$21 to print 12 documents in size Large.

Therefore, the answer is Option B.

12. D

Frankfurt, Germany	Beijing, China
11:35 am	11:35 am + 7 hours = 6:35 pm
	3:48 am next day

Eugene's flight duration:

3:48 am next day – 6:35 pm = 9 hours 13 minutes.

Therefore, the answer is Option **D**.

13. C

	A	B	C	D	E	F	G	H	I
1									
2									
3									
4									

The next 3 black tiles (portrayed as red) are in G3, H4, I2

Therefore, the answer is Option **C**.

14. E

Value of 8 in 9,738,124 = 8,000

Value of 2 in 9,738,124 = 20

Value of 3 in 9,738,124 = 30,000

$$(8,000 \times 20) - 30,000 = 130,000$$

Therefore, the answer is Option **E**.

15. A

List of Hana's possible numbers: 52, 78

List of Connor's possible numbers: 45, 75

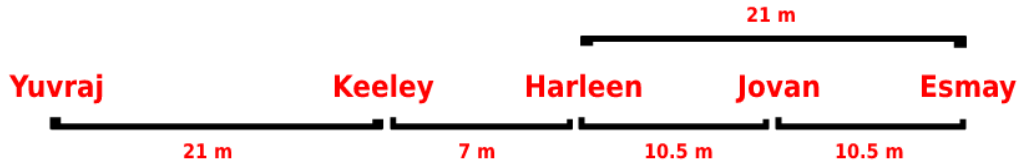

Largest possible value of Hana's number: 78

Smallest possible value of Connor's number: 45

$$\text{Sum: } 78 + 45 = 123$$

Therefore, the answer is Option **A**.

16. B

If the distance between Harleen and Jovan is 10.5 m, then the distance between Jovan and Esmay must also be 10.5 m because Jovan sits at a spot that is equal distance from Harleen and Esmay.

Since the distance between Harleen and Esmay is $10.5 + 10.5 = 21$ m, the distance between Yuvraj and Keeley must also be 21 m as stated in the second paragraph of the stimulus.

We know that the distance between Harleen and Keeley = 7 m.

Thus, the distance between Yuvraj and Esmay is $21 + 7 + 21 = 49$ m.

Therefore, the answer is Option **B**.

17. D

To make it easier, convert all fractions to decimals.

$$\frac{4}{5} = 0.80$$

$$\frac{1}{3} = 0.33$$

$$\frac{5}{8} = 0.625$$

$$1\frac{1}{5} = 1.20$$

Ascending order:

0.15, 0.33, 0.40, **0.625**, 0.80, 1.20, 1.25

The middle number is $0.625 = \frac{5}{8}$

Therefore, the answer is Option **D**.

18. B

Sharna completes a lap every 2 minutes.

Ella completes a lap every 4 minutes.

Wade completes 5 laps every 15 minutes or 1 lap every $15 \div 5 = 3$ minutes

The lowest common multiple of 2, 4, and 3 is 12.

Thus, 12 minutes will pass before Sharna, Ella and Wade meet at the starting line again.

Therefore, the answer is Option B.

19. E

Wallace is 2 times heavier than Ela, so their weight ratio is:

Wallace : Ela $\rightarrow 2 : 1$

In total, there are $2 + 1 = 3$ parts.

1 part = $147 \text{ kg} \div 3 \text{ parts} = 49 \text{ kg}$.

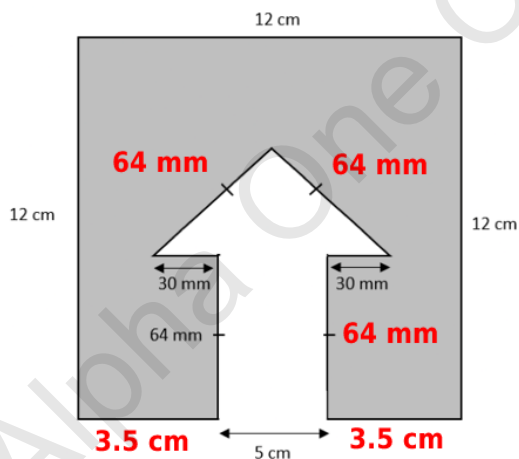

2 parts = $49 \text{ kg} \times 2 = 98 \text{ kg}$ (Wallace's weight)

1 part = 49 kg = (Ela's weight)

Difference in weight = $98 \text{ kg} - 49 \text{ kg} = 49 \text{ kg}$.

Therefore, the answer is Option E.

20. A

Note:

$64 \text{ mm} = 6.4 \text{ cm}$

$30 \text{ mm} = 3.0 \text{ cm}$

Perimeter = $12 \text{ cm} + 12 \text{ cm} + 12 \text{ cm} + 3.5 \text{ cm} + 6.4 \text{ cm} + 3.0 \text{ cm} + 6.4 \text{ cm} + 6.4 \text{ cm} + 3.0 \text{ cm} + 6.4 \text{ cm} + 3.5 \text{ cm}$

Perimeter = 74.6 cm

Therefore, the answer is Option A.

21. E

He starts at North.

3 half turns clockwise = 1 half turn clockwise → He faces South

5 quarter turns anticlockwise = 1 quarter turn anticlockwise → He faces East

Therefore, the answer is Option **E**.

22. B

Cube + Pyramid = 569 g

Sphere + Cube = 227 g

Pyramid + Sphere = 520 g

Cube + Pyramid + Sphere + Cube + Pyramid + Sphere = 569 g + 227 g + 520 g = 1316 g.

Here, we can see that 2 cubes + 2 pyramids + 2 spheres weigh 1316 g.

Thus 1 cube + 1 pyramid + 1 sphere must weigh $1316 \text{ g} \div 2 = 658 \text{ g}$.

Therefore, the answer is Option **B**.

23. C

We are given a pie chart representing Jeremy's business expenses, and the dollar amounts for Rent (\$27,000), Electricity (\$13,000), and Taxes (\$34,000). The amount for Overhead is unknown.

Since it's a pie chart, the entire circle represents 100% of the total budget. We can estimate the overhead slice by visually comparing it to the others.

First, we calculate the total of known values:

Rent: 27

Electricity: 13

Taxes: 34

Total so far: $27 + 13 + 34 = 74$

Based on the visual size of the Overhead slice (almost a third of the pie), 23 seems most reasonable, as it brings the total close to 100 and the portion size fits well with the visual.

Therefore, the answer is Option **C**.

24. D

If 1.5 servings of chocolate milkshake require 150 mL of chocolate syrup, then 1 serving of chocolate milkshake requires $150 \div 1.5 = 100$ mL of chocolate syrup.

Thus, 25 servings of chocolate milkshake require $100 \times 25 = 2500$ mL or 2.5 L of chocolate syrup.

Therefore, the answer is Option **D**.

25. A

From 9 am to 12 pm, Hettie travelled $2 + 10 = 12$ km.

Therefore, the answer is Option **A**.

26. B

Time when Hettie's bicycle was stationary:

10:00 am – 11:00 am (1 hour)

3:00 pm – 4:00 pm (1 hour)

Total time bicycle was stationary = $1 + 1 = 2$ hours.

Therefore, the answer is Option **B**.

27. C

(a) Speed 9:00 am – 12:00 pm = $\frac{2+0+10}{3} = \frac{12}{3} = 4$ km/h

(b) Speed 10:00 am – 1:00 pm = $\frac{0+10+8}{3} = \frac{18}{3} = 6$ km/h

(c) Speed 11:00 am – 1:00 pm = $\frac{10+8}{2} = \frac{18}{2} = 9$ km/h

(d) Speed 11:00 am – 2:00 pm = $\frac{10+8+12}{3} = \frac{30}{3} = 10$ km/h

(e) Speed 1:00 pm – 5:00 pm = $\frac{12+8+0+8}{4} = \frac{28}{4} = 7$ km/h

Therefore, the answer is Option **C**.

28. D

Average speed over whole day = $\frac{2+0+10+8+12+8+0+8}{8} = \frac{48}{8} = 6$ km/h

Therefore, the answer is Option **D**.

29. B

Since a shape made of 12 identical squares has an area of 48 cm^2 , the area of each small square must be $48 \div 12 = 4 \text{ cm}^2$.

Since the area of a small square is 4 cm^2 , each side must be $\sqrt{4} = 2 \text{ cm}$.
Thus, the perimeter of the new shape must be $24 \times 2 = 48 \text{ cm}$.

Therefore, the answer is Option **B**.

30. B

The shape can either be rotated 135° anti-clockwise or 225° clockwise.

Therefore, the answer is Option **B**.

31. D

$$\frac{3}{4} = \frac{6}{8}$$

Hence, $\frac{6}{8} - \frac{3}{8} = \frac{3}{8}$ is equivalent to 0.63 L

$$\frac{1}{8} \rightarrow 0.63 \text{ L} \div 3 = 0.21 \text{ L}$$

$$\frac{8}{8} \rightarrow 0.21 \text{ L} \times 8 = 1.68 \text{ L (maximum capacity of the esky).}$$

Therefore, the answer is Option **D**.

32. C

The relative speed (how much faster Humphrey is gaining on Bri) is:

$$4 \text{ km/h} - 3 \text{ km/h} = 1 \text{ km/h}$$

Since Humphrey starts 2 km behind, and gains 1 km every hour, it will take:

$$2 \text{ km} \div 1 \text{ km/h} = 2 \text{ hours}$$

Therefore, the answer is Option **C**.

33. E

Statement 1: From the pie graph, there is less than 50% of visitors aged between 21 and 40 at the beach. This statement is incorrect.

Statement 2: The sector for visitors under 20 has an angle of 90° , meaning the sector represents 25% of the total pie chart. Thus, 25% of visitors at this beach are indeed under 20 years old. This statement is correct.

Statement 3: If there were 18 visitors that were above the age of 60 years old, then 15% would represent 18 visitors. Thus, 100% would represent $18 \div 0.15 = 120$ visitors. This statement is correct.

Therefore, the answer is Option **E**.

34. E

Triangle A:

$$50^\circ - 20^\circ = 30^\circ$$

Triangle B:

$$160^\circ - 125^\circ = 35^\circ$$

$$\text{Total} = 30^\circ + 35^\circ = 65^\circ$$

$$180^\circ - 65^\circ = 115^\circ$$

Therefore, the answer is Option **E**.

35. C

Let's assume the number of blue containers = x

- Red = $3x$ (triple the blue)
- Green = $2x$ (double the blue)
- Yellow = $\frac{1}{3}$ of green = $\frac{1}{3} \times 2x = \frac{2x}{3}$

$$\text{Total} = x + 3x + 2x + \frac{2x}{3} = 6x + \frac{2x}{3} = \frac{20x}{3}$$

Set this equal to 1000:

$$\frac{20x}{3} = 1000 \rightarrow x = 150$$

$$\text{Green} = 2x = 300, \text{Yellow} = \frac{2x}{3} = 100$$

$$\text{Yellow} + \text{Green} = 400$$

$$\frac{400}{1000} \times 100\% = 40\%$$

Therefore, the answer is Option C.

Writing Test 5 Exemplar

Sydney is an area with a diverse range of wildlife, with many animals being quite deadly!

Write an advice sheet for an exchange student who will be visiting Sydney for 2 months.

You may choose to write about safely avoiding certain wildlife such as:

- Funnel Web Spiders that are often found in backyards.
- Blue Bottle Jellyfish that are found in popular beaches.
- Red Belly Black Snakes that are often found in local parks.

Staying Safe from Sydney's Wildlife!

Welcome to Sydney! While this vibrant city is famous for its beaches, parks, and unique wildlife, it's also home to some animals that can be dangerous if not treated with caution. As an exchange student visiting for two months, it is important that you feel confident and informed when exploring the outdoors. This advice sheet will guide you through three common creatures to be aware of: funnel web spiders, blue bottle jellyfish, and red belly black snakes. By learning how to avoid them and respond appropriately, you will be able to enjoy your stay safely and sensibly.

Watch Your Step: Funnel Web Spiders in Backyards

Funnel web spiders are one of Australia's most venomous spiders, and they are often found in backyards, especially in moist, sheltered places like under logs, garden pots or in shoes left outside. Their shiny black bodies and aggressive defence behaviour make them easy to recognise, but that doesn't mean you should get close. To avoid an unwanted encounter, it is best to wear closed-in shoes when walking around the garden or backyard. You should also keep outdoor areas neat and check inside shoes or gloves before using them. If you do spot a funnel web spider, never attempt to move or squash it. Instead, notify a nearby adult or call a professional pest control service. While these spiders are not naturally looking to attack humans, they will bite if threatened, so it's best to keep your distance and stay alert when outdoors.

Be Beach-Ready: Avoiding Blue Bottle Jellyfish

While Sydney's beaches are world famous, they can sometimes attract visitors from the sea that are far less welcome. One of these is the blue bottle jellyfish. These creatures have long, trailing tentacles that can cause extremely painful stings, even after they have washed up on shore. To reduce the risk of being stung, always swim between the red and yellow flags at patrolled beaches where lifeguards are watching out for hazards. Keep an eye out for warning signs that indicate jellyfish are present, and never touch jellyfish, even if they appear to be dead. For extra protection, consider wearing a rash vest or wetsuit, especially when swimming in open water. If you are unlucky enough to be stung, rinse the affected area with seawater and seek assistance from lifeguards immediately. Staying informed and swimming responsibly will help keep your beach visits enjoyable and safe.

Stay on the Path: Red Belly Black Snakes in Bushland

Many of Sydney's parks and bushwalking tracks are rich with natural beauty, but they are also home to red belly black snakes. These snakes are easily recognised by their black bodies and red underbellies, and although they are generally shy, they can bite if startled or stepped on. The best way to avoid them is to stick to marked walking trails and avoid wandering through long grass. Wearing long pants and sturdy shoes is a smart choice, particularly if you are exploring areas near water or thick vegetation. If you do happen to see a snake, stay calm and back away slowly without making any sudden movements. Do not attempt to touch or photograph it, as this can provoke a reaction. By being cautious and respectful of the wildlife, you can enjoy Sydney's outdoors without putting yourself at risk.

Spending time in Sydney can be a rewarding and unforgettable experience, especially when you are prepared. By taking simple steps, such as wearing shoes in the garden, following beach safety guidelines, and staying on bushwalking paths, you can avoid dangerous wildlife and stay safe during your stay. Explore confidently, stay alert, and make the most of your time in one of the world's most exciting cities. Safety and adventure can go hand in hand when you know what to do.

Thinking Skills Test 5 Solutions

1. A

Statement I is correct as Jessie attending the meeting is dependent on Danny also being at the meeting and if he isn't there then she will also not be there.

Statement II is incorrect as Jessie not being at the meeting does not determine Danny being at the meeting, but if Danny is not at the meeting, then Jessie will definitely not be at the meeting.

Since only statement I is correct, the answer is (a).

2. D

The pattern which the client was looking for was to have all corners of the shape being drawn to touch the circumference of the circle. We can see that Papers 1, 2 and 3 all have all vertices of the inner shape touch the circumference of the circle but the triangle in Paper 4 has one corner which is not touching.

This is answer (d).

3. C

Order: TALLEST – Rachel – Samuel – Mark – Liam – SHORTEST

This is answer (c).

4. A

The net should have the 2 bases plus 8 connecting rectangles and squares which will make up the entire 3D shape.

Answers (b) and (c) are incorrect as the 2 bases are in the wrong position. Answer (d) does not have enough of the connecting pieces to make up the full shape and would be an incomplete shape.

This means that answer (a) is correct.

5. B

Out of the options given we can definitively say that answer (b) is correct as the turtle's lifespan is longer than a tiger's lifespan and a house cat's lifespan which are members of the cat family. Hence, they have a longer lifespan than some creatures of the cat family.

This is answer (b).

6. D

Question requires a guess and check response by working backwards from the clues provided.

Trialling (a) 162478, the third digit is NOT odd, eliminating it as the correct response.

Trialling (b) 243663, the third digit is odd. The 4th digit is greater than the 1st digit. The 2nd digit is NOT twice the value of the 3rd digit. The first two digits are both even and do not sum to an odd number, eliminating it as the correct response.

Trialling (c) 321294, the third digit is odd. The 4th digit is NOT greater than the 1st digit, eliminating it as the correct response.

Trialling (d) 363601, all of the clues work for this response and therefore it IS the correct response.

Therefore, the answer is (d).

7. B

Find the cost at each store:

$$\begin{aligned}\text{Store A} &= \$11.20 + \$6.60 + \$2.40 + \$5.90 \\ &= \$26.10\end{aligned}$$

$$\begin{aligned}\text{Store B} &= \$12.00 + 5.50 + \$3.10 + \$5.40 \\ &= \$26.00\end{aligned}$$

$$\begin{aligned}\text{Store C} &= \$12.70 + \$6.70 + \$3.30 + \$5.80 \\ &= \$28.50\end{aligned}$$

This means that Store B is cheapest and so the answer is (b).

8. A

Options (b), (c) and (d) all weaken the argument about schools including sport in their curriculum. Option (a) is the only one that strengthens the argument and hence the answer must be (a).

9. C

Assuming the initial scenario, 30 notebooks at \$5 each cost \$150 in total and 10 bookmark packs containing 4 bookmarks each at \$3 cost \$180.

Considering the new scenario where only 22 people turned up, 22 notebooks at \$5 costs \$110 and for 22 people, only 6 bookmarks packs (\$3 each) are needed, which costs \$18, hence the total cost for 22 people is \$128.

Hence Sarah spent \$52 more than required.

Therefore, the answer is (c).

10. D

Looking at the first four rows (top 4 finishers per dish), we check for each chef:

Omar was not in the top 4 for Second Course (he was 5th).

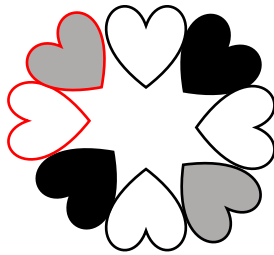

Bella was not in the top 4 for Second Course (she was 8th).

Nia was not in the top 4 for First Course (she was 5th).

Raj appears in the top 4 in all five dishes.

This is answer (d).

11. B

This shows that answer (b) correctly completes the shape.

12. D

Option (a) strengthens the argument and option (b) is irrelevant. Option (c) and (d) both weaken the argument, however option (d) is stronger. This is because the argument from option (c) is based on devices having short lifespans because of the battery, so while there might be new and better devices, that doesn't make lifespans longer or provide worth for the purchase in the first place. Option (d) however directly counters the argument by mentioning how this is becoming less of an issue, hence weakening it more than option (c).

Therefore, option (d) weakens the argument the most and is the answer.

13. B

Tim finishes third → Tim = 3rd

Simon finishes ahead of Harry → Simon is in a higher place than Harry

Lewis finishes after Tim → Lewis is 4th (since only one spot is after 3rd)

So now we know:

Tim = 3rd

Lewis = 4th

That leaves 1st and 2nd for Simon and Harry

Simon is ahead of Harry → So Simon = 1st, Harry = 2nd

This is answer (b).

14. D

We know that gorillas have no tails, which means that all the tails counted belong to the horses.

$$\text{Horses legs} = 30 \times 4 \text{ legs} = 120 \text{ legs}$$

$$\text{Gorillas legs} = 144 \text{ legs} - 120 \text{ legs} = 24 \text{ legs}$$

$$\text{Gorillas} = 24 \text{ legs} \div 2 \text{ legs per gorilla} = 12 \text{ gorillas}$$

This is answer (d).

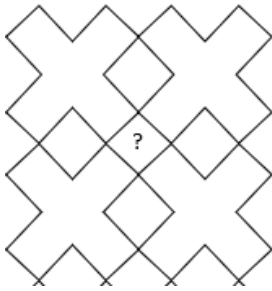

15. A

If we are looking for something which is NOT an assumption, then we must search for the information which corresponds with the statement Reina is saying.

She is discussing how people who like swimming will like tennis and so we need a statement which regards this and gives a reason for it.

This is seen as answer (a) and is NOT a mistake that Reina has made.

16. A

If the grid was expanded, then the '?' would be encompassed in a small sideways square which corresponds to answer (a).

17. C

From 5:32pm – 5:35pm we have 3 minutes which is 180 seconds.

$$\text{Right Hand} = 180 \div 2 \text{ seconds per click} = 90 \text{ clicks}$$

$$\text{Left Hand} = 180 \div 5 \text{ seconds per click} = 36 \text{ clicks}$$

$$\text{Difference} = 90 - 36 = 54 \text{ clicks}$$

This is answer (c).

18. B

The argument is about how sales assistants need a certain attitude to succeed or sell items.

Option (d) strengthens the argument and options (a) and (c) are not relevant to the argument.

Option (b) weakens the argument by showing how a positive demeanour is not necessary to be a good salesperson as customers don't care about it much.

Therefore, the answer is option (b).

19. D

Sheryl says: "If my phone has a screen protector and a case, it will not break." The original statement doesn't say it won't break, only that it's less likely. Therefore, Sheryl is incorrect.

Diane says: "If I drop my phone and it breaks, it must be because it did not have a screen protector or case." This is incorrect as a phone with protection can still break. Her statement wrongly assumes that protection guarantees no breakage.

Since both statements are incorrect, the answer is (d).

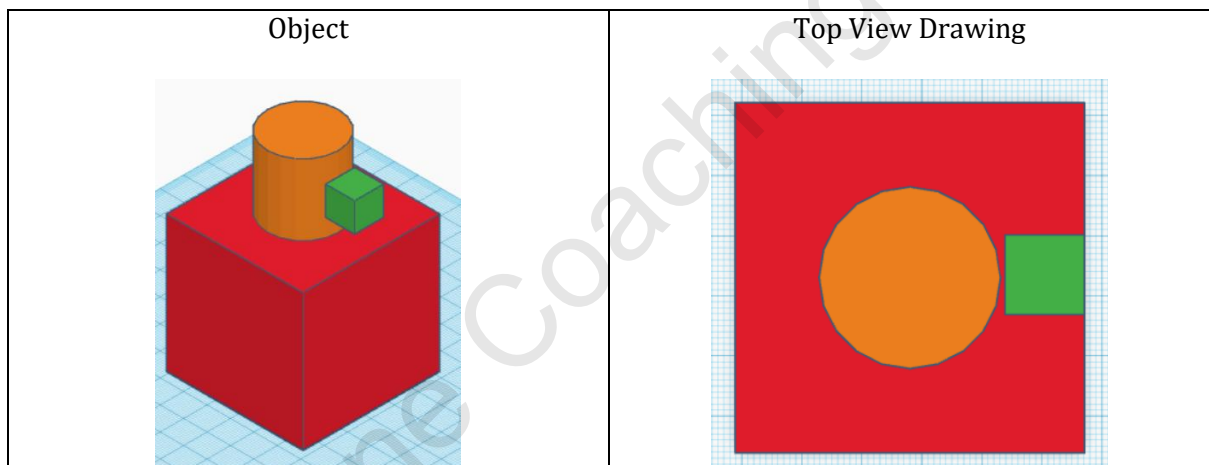

20. C

Order: FIRST – Sam – Victoria – Justin – Rylie – LAST

This means that Justin is third in line which is answer (c).

21. A

Not to scale

This is answer (a).

22. B

The mistake in Penny's statement is that she has wrongly assumed that none of the countries overlap and fulfil more than one condition. For example, it could be that Japan has tickets which are less than \$500 and has relatives that live there. In this case there would be less than 37 countries she can consider.

This is answer (b).

23. C

Sarah has recently finished high school and has a certificate. She also has three and a half years of volunteering experience, but she has not started university, does not have any paid customer service experience, and has not completed an internship.

To be a sales associate, she needs either two years of volunteering experience or one year of paid customer service, and a high school certificate. Sarah meets the volunteering and certificate requirements, so she qualifies for this position.

To be an outreach coordinator, she needs either two years of volunteering experience or a university degree. Sarah meets the volunteering requirement, so she also qualifies for this position.

However, to be a marketing assistant, a high school certificate and internship experience are both required. Although Sarah has the certificate, she does not have any internship experience, so she is NOT eligible for this role.

This is answer (c).

24. D

Find out how much a pack of apples is from Sandy's equation.

$$3 \text{ packs of apples} = \$5.60 + \$2.20 = \$7.80$$

$$1 \text{ pack of apples} = \$7.80 \div 3 = \$2.60$$

$$3 \text{ banana bunches} + 2 \text{ packs of apples} = \$8.80$$

$$3 \text{ banana bunches} + 2 \times \$2.60 = \$8.80$$

$$3 \text{ banana bunches} + \$5.20 = \$8.80$$

$$3 \text{ banana bunches} = \$8.80 - \$5.20$$

$$3 \text{ banana bunches} = \$3.60$$

$$1 \text{ banana bunch} = \$3.60 \div 3 = \$1.20$$

This is answer (d).

25. A

Answers (c) and (d) are incorrect as they are the incorrect shape that the inside of the clay would be, as it resembles the first 2 options more. However, it is not answer (b) as the clay shape has 3 levels and so the inside piece must have a matching 3 levels which this does not.

Answer (a) is the correct interior shape.

26. C

The pattern seems to be: Black – White – Grey – White

If we go backwards down to the first card, then we can see that the hidden circle should be a black circle.

This is answer (c).

27. B

The mistake in Justin's statement is that he has wrongly assumed that only plants release glucose. There could be a number of different things which release glucose which are not classified as being plants.

This is answer (b).

28. B

7 6 1 5 9 5
H,Q,Z – C,L,U – E,N,W – G,P,Y – I,R – G,P,Y

Out of the options, the answer is option (b) as it corresponds to all the correct letters.

29. D

We know that a student who attends the school is both knowledgeable in music theory and able to play the instrument, but the opposite cannot be said as true. Someone who is knowledgeable in music theory and can play an instrument may not definitely get a position in the school as there could be other factors for enrolment and getting into the school, which may require other skills that Sarah may not have.

This shows that answer (d) is incorrect.

30. D

Statement I is incorrect as we do not know if all sharks have gone and threatened a squid and so not all of them may have been inked by a squid.

Statement II is incorrect as the original statement never mentions if the squids manage to evade and escape any predators and even if they inked, they still may not be able to escape their predators.

Since both statements are incorrect, the answer is (d).

31. B

The only possible view which is impossible is answer (b) as we know the circular shape must be the head. This means the rectangle must be the base which is not possible as the image shows the base to be greater than the head. All the other options work, as the base can be circular or rectangular from the bottom view.

This is answer (b).

32. C

The argument is about why dried fruits are beneficial and better than fresh fruits. Options (a), (b) and (d) are not relevant to the argument. Option (c) strengthens it by providing a benefit of dried fruits.

33. D

Henry's statement is incorrect as those who are good at cooking learned first through cooking noodles, but that doesn't mean that cooking noodles will guarantee becoming a good cook.

Laura's statement is incorrect as being bad at cooking does not mean that they haven't learnt how to cook noodles and so they may not dislike cooking.

Since both statements are incorrect, the answer is (d).

34. A

Order: FIRST – Cucumber – Carrot – Corn – Eggplant – LAST

This shows that last place went to the eggplant which is answer (a).

35. C

Out of the options only answer (c) is true as the second statement says that watching a tragic movie must be followed by a horror movie or vice versa. This shows that by watching a tragedy they must have watched a horror movie.

This is answer (c).

36. B

Out of all the options, answer (b) cannot be made as the trapeziums aren't fully in place and the area is too large to fit all the shapes along with the 'L' shapes.

This is answer (b).

37. A

The mistake in Darryl's statement is that he has wrongly assumed that it was her diet that was affecting her performance when in fact it could be how intense she was training which increased her performance and made her better.

This is seen as answer (a).

38. A

We have two cases where Crystal and Isabella switch places in the middle. However, if this is the case then the top and bottom marks are certified. Since Valerie scored lower than Crystal by 3 points and Crystal and Isabella are apart by 1 point, we know that Valerie is still the lowest mark in the exam. If Crystal was 3rd then Valerie is last and if Isabella is 3rd then Valerie is 2 points lower than her, which still makes her still last place.

Order: FIRST – Tasha – Crystal/Isabella – Crystal/Isabella – Valerie – LAST

Hence, a possible order would be answer (a).

39. C

We do not know how reading the History of Phone Designs affects the person in terms of reading the other two books, as all the statements being made are after the people first read the other two books, and so we cannot make any claims on what other books Gemma has read.

This is answer (c).

40. C

Bus to office = 34 mins

Home to bus = $34/2$
= 17 mins

$Total\ time\ needed = 34 + 17 = 51mins$
 $Start\ Time = 11:00am - 51mins$
 $= 10:09am$

This is answer (c).
